PURGE is a highly effective material designed to break down the solids in lift stations. The Special Ingredient in **PURGE** will attack the build-up of deposits that are unique to lift stations. **PURGE** will actually liquefy the solids which will allow them to be flushed down the lines as the float activates. **PURGE** your system today.

DIRECTIONS

PURGE should be added to the solids floating at the top of the lift station. If it is not added to the solids it will fall to the bottom of the lift station. Add approximately 1/2 pound of **PURGE** for every 100 gallons of capacity. Monitor the progress after five days from when the product was added. As solids build back up repeat the treatment as necessary.
